

A more effective way to transport
bulk non-hazardous liquids

We handle with care your success is our success.

OTS Flexitanks represent a breakthrough in the transportation of non-hazardous liquids. Instead of being fixed-shape containers, OTS Flexitanks are multi-layered bladders that hold up to 24,000 litres of liquids each and fit into standard 20-ft ocean freight containers. They offer many advantages over traditional methods of shipping, for a more streamlined service.

Higher efficiency at a lower cost

With OTS Flexitanks, we are able to overcome the problems associated with the use of ISO tank containers and IBC totes and drums. The former require return loads, long-term leasing, and extensive cleaning to avoid cross-contamination, while the latter do not make full use of the cargo space available. By directly addressing these issues, the OTS Flexitank solution increases the efficiency of the supply chain system leading to a decrease in shipping costs.

Maximising cargo space

By embracing the fluid nature of liquids, OTS Flexitanks make full use of the container space available, and can ship up to 31% more cargo than using traditional transport methods.

Environmentally friendly solution

OTS Flexitanks are for single-use only, eliminating the need for expensive cleaning procedures and return load transportation. Made of virgin films, they are easily recyclable. Combining these factors, OTS Flexitanks represent a huge step towards being environmentally responsible.

Comprehensive insurance coverage

We work only with first-tier manufacturers, who have insurance in place to protect against product liabilities arising from Flexitank failures, even though such incidents are rare. The coverage is at a minimum of \$5 million per Flexitank issue, offering you peace of mind.

How it works

The OTS FLEXITANK solution

1 We source our Flexitanks from leading suppliers around the world.

2 The Flexitank is fitted into a container, customised to meet your shipping needs. This is carried out at your site, an OTS location, or at our suppliers' working quarters at the port.

3 Cargo is collected from your site and transported via road or rail to the port of export.

4 The container fitted with our Flexitank is shipped to its destination using our ocean freight services.

5 Customs clearance is obtained at the shipment's destination.

6 Cargo is transported via road or rail to the final destination.

7 The Flexitank is disposed of or recycled after use.

A summary of the benefits

- Save on freight charges as there's no need for a return load.
- Enjoy seamless service with our end-to-end logistics solution.
- Transport more in every container than using IBC totes or drums.
- Improve productivity with 90% less loading and unloading than when using IBC totes or drums.
- Eliminate cleaning costs and risk of contamination with the single-use, environmentally-friendly Flexitanks.
- Raw goods are delivered to filling destinations for more economical packaging and distribution.

OTS, your trusted business partner

Choose OTS to enjoy a host of privileges:

- Full supply chain visibility with 24/7 online tracking and regular email updates
- Global flexibility with our worldwide reach
- Transparent and predictable cost structure
- Reliable service with on-time delivery
